Planting Note for 12.9-10.19

Eucalyptus fibrosa subsp. *fibrosa* woodland on sedimentary rocks

Additional notes:

Planting intervals and percentages:

- *Eucalyptus fibrosa* should make up 80% of the canopy species.
- Remaining tree species should be distributed evenly through the area.
- Remaining species evenly distributed.

Site preparation

- Firstly consider if the site is suitable – areas that are moisture retentive usually give the best results e.g. creek/river, rich scrub soils and floodplains.
- Consider whether the planting area can be deep ripped or hand planted.
- Is the site safe from predators e.g. livestock, hares and wallabies.
- The site may have to be fenced off.
- Tree protection bags may have to be used.
- Deep ripping firstly and allowing rain to enter the ripples over weeks or even months is beneficial.
- When hand planting pre-wet the holes with water and a small amount of detergent, or use water retentive crystals wet or dry.
- Use only healthy well rooted stock plants native to the ecosystem you are planting in.
- Use deep native tubes for eucalypts, and/or 150mm pots with rainforest species.
- Additives to the planting hole e.g. gypsum, crusher dust, diatomaceous products, seaweed or fish emulsion
- Use organic slow release fertilisers in granules or pellet form. These can be placed in the hole before planting or on top before or after mulching. They should always be watered in.
- Staking should not be necessary unless they are being used as markers only.
- Construct a shallow basin when planting so water can enter root area of plant.
- Use mulch e.g. hay, straw, sugar cane, woodchip, tub ground green waste (strips of wood and bark), rocks if available, gravel, and crusher dust.
- Water in tubes with 2 litres or more and 4 litres for 150mm pots. Plants will do best with 4 litres of water per plant per week for up to 6 weeks.
- Maintenance will need to be carried out for at least 12 months or more. Regular herbicide spraying using appropriate herbicides or manual removal of weeds. Periodic replacement of mulches as they break down.
